### PCT ELECTION OF SPECIES

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Species directed to sulphenyl compounds having the formula R-S-X and uses of the compounds. In particular, the variable R represents any organic group having at least one element labeled with an isotope and the variable X is any leaving group. The formula encompasses distinct species because R may be an aryl group or it could be an alkyl group (note that an alkyl group is distinct from an aryl group). In addition, the variable X encompasses a multitude of leaving groups which can be distinct from one another depending on the group selected.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Note: Applicant is respectfully requested to elect a single disclosed species. The species should include a specific R group; a specific X group; a specific labeled isotope; and a specific peptide. In addition, Applicant is respectfully requested to identify the claims that read on the elected species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Claims 1-45 are generic to the various species and uses thereof wherein the compounds have the general formula R-S-X as set forth above.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the species are structurally distinct from one another (e.g., a compound wherein R is an aryl as opposed to an alkyl group and X is a leaving group containing an aryl group instead of maybe an halogen). As a result, prior art that is cited against one invention would neither anticipate nor render obvious another species. In addition, a separate search of the art is necessary in order to examine structurally distinct species.

Due to the complexity of the restriction requirement, a telephone call was not made to request an oral election to the above restriction requirement.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does

Art Unit: 1618

not distinctly and specifically point out supposed errors in the restriction requirement,  
the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
